VIACHESLAV SALENKO

Passionate Full Stack Developer

SUMMARY

You can be sure that you are getting a top quality full stack developer who will communicate and work with you to achieve your gals. In my opinion, if you are not getting more than what you paid for, then I am not doing my job right.

I work hard to create clean, concise sites that are visually appealing but functional for the user. I consider the success of my business to be whether my work achieves my client's intent. I put a lot of effort into reaching my target audience in the best possible way.

My clients call me a passionate and strong problem solver. You will see successful results throughout your engagement, you will know a reliable, long-term developer, and you will never have to look for a new developer for your business again.

EXPERIENCES

Web/AI Developer   *MedMinded | 2023 - 2024*

o Develop and maintain web applications: Uses modern frameworks and libraries such as React on the frontend and Node.js on the backend to create interactive and scalable web applications.
o Architecture design: Creates and implements architectural solutions for applications, defining the technology stack and integration points between the frontend and backend.
o Performance Optimization: Applies tools and techniques such as Webpack and code profiling to improve application performance and reduce load times.

Bachelor's Degree in Computer Science

Lviv Polytechnic National University

2011 - 2015

SKILLS

● React/Next/Vue/Angular
● PHP/Laravel/Symfony
● Python/Django/Flask
● GoLang/Rust/ROR
● C#/ASP.NET
● React Native
● OpenAI/ML/DL
● AWS/Azure
● Docker/Kubernets
● Git
● Jira/Airtable

Full Stack JS Developer   *TopCorn | 2019 - 2023*

o As a mid-level developer, I developed and optimized complex web and mobile applications, working with a full stack of technologies. On the frontend, I used React to build dynamic components and interactive interfaces. My work included implementing complex functionalities such as state management with Redux and integrating third-party APIs, such as payment processing or analytics.

o On the backend, I worked with Node.js and Express, creating scalable RESTful APIs and GraphQL services. I was responsible for designing and optimizing database schemas, working with SQL (PostgreSQL) and NoSQL (MongoDB) databases to ensure efficient data storage and processing. I also implemented user authentication and authorization mechanisms using JWT.

Freelancer   *Full stack developer | 2015 - 2019*

o Developed proof-of-concept DApps for clients exploring Blockchain technology, utilizing Solidity and Web3.js to create small-scale NFT and DeFi platforms.

o Created and deployed several AI-driven chatbots using machine earning libraries and frameworks, assisting clients in automating customer support functions and improving customer interactions.

o Collaborated remotely with clients worldwide, refining project scopes and translating business requirements into technical deliverables. This resulted in over 30 successful small-to-medium-sized project completions.
